SEPTEMBER 2021

Landscape Update

Fall is just around the corner! Which means it's the perfect time of year to enhance your outdoor spaces.

There are many reasons why fall is the time to install the enhancements you've been thinking about / wanting all year. First, the soil temperature is warm (between 55 and 75 degrees), which is optimal for root growth. Planting this time of year allows your plants several weeks of vigorous root development to prepare for the coming winter and long healthy lives.

Adding curb appeal to a property provides beautification and raises the value of property in that space. Russell Landscape enhancements focus on providing an array of color, texture, blooms, and a hierarchy of different heights. Our design + build team focuses on providing these key principles when enhancing space no matter the size. Russell Landscape area managers and designers have the knowledge and help relieve any problem spaces, and add functionality to areas that have potential to be so much more.
